

Offshore Special Regulations

3.21.1(a) – Water tank and delivery pump

A submission from the Offshore Racing Congress

Purpose or Objective

Clarification on use of drinking water during Cat. 2 and Cat 3 races.

Proposal

Delete OSR 3.21.1(a)

MoMu 2,3 (a) Permanently installed delivery pump and water tank(s).

and replace with

MoMu 2,3 (a) Water tank(s) or container(s) containing at the start at least 3 liters of water
per person for the likely duration of the voyage

Current Position

As above.

Reasons

1. Current rule requires water tank with delivery pump without any requirement to have water in it.
 2. Many boats like the Farr 30, Corsa 915, TP 52 don't have the water tank(s) and delivery pump installed. Some of them (like TP 52) are not allowed by the Class Rules to have it installed. Instead, these boats may have water containers to provide enough drinking water for the crew for duration of the race.
