

IJSC „IJ Report System and statistics” WT – Annual Report 2025

In the past year, I was responsible for supervising the IJ Report system. During this period, together with Gonzalo Heredia, we reviewed, approved, and published the submitted reports. Whenever necessary, we asked the submitters to make corrections or modified the reports manually to speed up the process. Unfortunately, we have noticed shortcomings in the system, particularly in data collection — some of the collected data are not used in the work of the IJSC, while other essential data are not being gathered at all. It seems that introducing a new system could reduce the number of errors appearing in the reports, which often result from a lack of understanding of the current system. In the long term, it would also be worth considering the development of a judge evaluation feature, which could allow for post-regatta feedback and thus facilitate judges self-improvement.
